MADE 3.8.12 (Hotfix)

Release Notes

MADE 3.8.12 Hotfix

This hot fix addresses an issue identified in version v3.8.11 that impacts the save performance of MADE projects containing exceptionally large models. This modification significantly reduces the save time for such projects to a more acceptable duration. Additional optimizations in this area will be incorporated into the subsequent release.

This release is not considered a critical update and can be skipped if this issue is not considered major as this change will be reflected in the next major release.
